Accessibility, Design, and Planning

Fall 2026

Maryam Hosseini

City & Regional Planning

Why should we even care?

About walkability?

Why should we even care?

About the design and physical form of the cities?

Why Should we Even Care?

- Public spaces and urban amenities are **public goods**. If people cannot afford to live next to them, we should at least make sure they can still reach and use them.
- Showing what quality of public spaces matter, gives us evidence to argue for providing all groups of residence with services and amenities they can actually use.
- The answer is not to make public spaces less attractive so higher income groups will stay away and protect prices. The challenge is to improve places **without making existing residents unable to remain there**.

Why Should we Even Care?

Understanding the world around us

Understanding how people interact with it, what they need and how cities can better support those needs

Impacts on health, well-being, social capital, environment and climate, economy, quality of life and way more.

Where are We Going?

W1: "How do you define walkability?"

**Background
Concept**

W2 S2: Walkable for whom? Where?
Trip purpose and competing impacts

W3: Space and place
How streets are experienced

W4 S1: Space and place
comfort, safety, and staying

Conceptualization

Formulating a **systematized concept**
through reasoning about the **background concept**,
in light of the goals of research.

Where are We Going?

W1: "How do you define walkability?"

W2 S2: Walkable for whom? Where?
Trip purpose and competing impacts

W3: Space and place
How streets are experienced

W4 S1: Space and place
comfort, safety, and staying

W4 S2: Walk/rollability as a systematized concept

W5 S1: Urban accessibility as a systematized concept

Conceptualization

Formulating a **systematized concept**
through reasoning about the **background concept**,
in light of the goals of research.

Systematized Concepts *Definition!*

A specific formulation of a concept used by
a given scholar or group of scholars;
commonly involves an explicit definition.

How do you define walkability?

- 1- Write your own definition.
- 2- Pick a definition from one of the papers you've read, that is closest to your idea, and say how that definition refines yours.

Five questions to carry forward

1. For whom?
2. For what trip?
3. What enables or constrains it?
4. What do people do in response?
5. What consequences follow and compared with what?
